

First-action consequences on selected development states

23 selected states · 16 complete · 7 validator rejections · original v3 development data

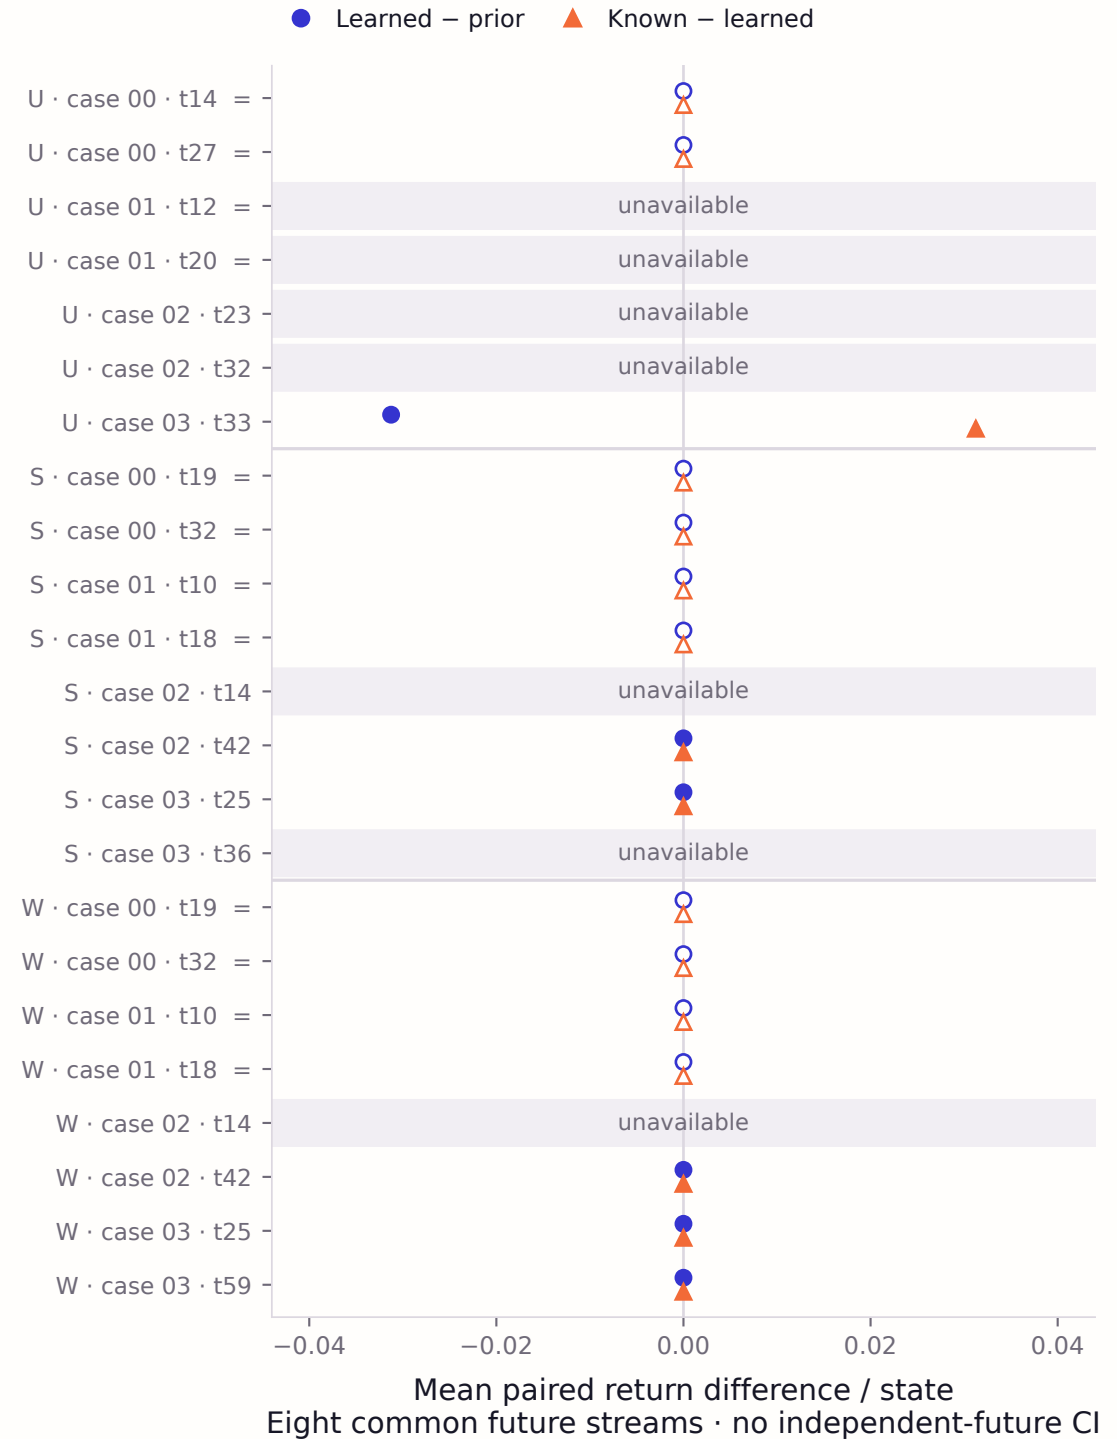

A Coverage and unavailable consequences

C Components on valid changed-action pairs

Paired contrast	Valid pairs	Collision + / -	Keys + / -	Escape + / -
Uniform Learned – Prior	8	0 / 0	0 / 1	0 / 0
Uniform Known – Learned	8	0 / 0	1 / 0	0 / 0
Uniform Known – Prior	0	—	—	—
Stationary Learned – Prior	16	0 / 0	0 / 0	0 / 0
Stationary Known – Learned	8	0 / 0	0 / 0	0 / 0
Stationary Known – Prior	8	0 / 0	0 / 0	0 / 0
Switch Learned – Prior	16	0 / 0	0 / 0	0 / 0
Switch Known – Learned	16	0 / 0	0 / 0	0 / 0
Switch Known – Prior	16	0 / 0	0 / 0	0 / 0

B Valid state effects; missing values stay missing

U = uniform · S = stationary · W = switch. = / open markers: agreement controls; identical actions share one execution.

Components: + / – counts futures favoring / disfavoring the left action (fewer collisions, more keys/escapes). Cases and futures are shared.

Five of 11 disagreement states are unavailable. Validator rejections are not observed collisions; a small 12-step sample cannot establish equivalence.
