

A frozen program on 256 fresh paired cases

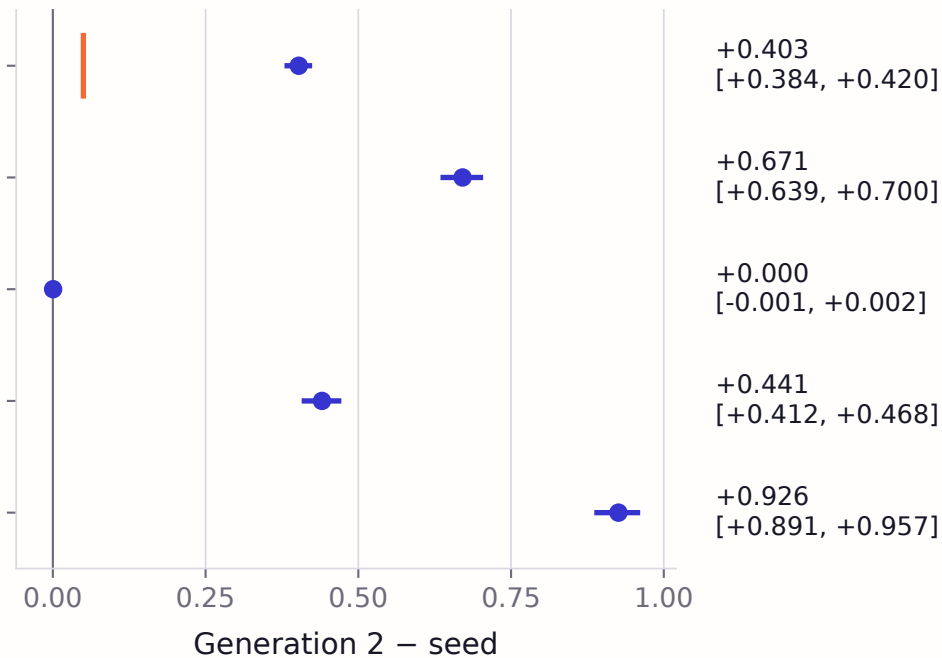

Original maze and objective · generation 2 selected before assessment · one prespecified primary contrast

Original seed Selected generation 2

A Program means

B Paired effects and 95% intervals

Orange tick: prespecified meaningful $\Delta F = 0.05$. The original seed is a weak baseline, not a strong pathfinding comparator.

95% intervals: whole paired episodes; panel A escape uses separate-arm Wilson intervals. Secondary intervals are unadjusted.

A measures current-map reconstruction under different actions. These results do not isolate learning or establish discovery reliability.
