

full-r1 · independent search checkpoint

Five fixed development cases · every model role and failed request counts toward the same allowance

24/24 requests · 1 failed request · 43.4 provider-minutes · 7 valid descendants · 40 training episodes

Numbers at source points are generation IDs. Dotted line marks actual request consumption; unused allowance stays visible.

Search fitness is selection-biased. No fresh assessment, repeatability claim or causal attribution follows from this curve.
